

# 答え

1

$$\text{道のり} = \boxed{\text{速さ}} \times \boxed{\text{時間}} \text{でもとめられます。}$$

2

$$\textcircled{1} \quad 55 \times 4 = 220 \quad (\quad 220 \text{ km} \quad )$$

$$\textcircled{2} \quad 100 \times 15 = 1500 \quad (\quad 1500 \text{ m} \quad )$$

$$\textcircled{3} \quad 35 \times 35 = 1225 \quad (\quad 1225 \text{ m} \quad )$$

$$\textcircled{4} \quad 45 \text{ 分} = \frac{45}{60} = \frac{3}{4} \text{ 時間}$$

$$120 \times \frac{3}{4} = 90 \quad (\quad 90 \text{ km} \quad )$$

$$\textcircled{5} \quad 40 \text{ 分} = \frac{40}{60} = \frac{2}{3} \text{ 時間}$$

$$63 \times 3 \frac{2}{3} = 63 \times \frac{11}{3}$$

$$= 231 \quad (\quad 231 \text{ km} \quad )$$
